

IT'S NOT JUST WHERE YOU START IT'S ALSO WHERE YOU FINISH

DL-FLEX2'S PROPRIETARY ON-BOARD IC CHIPS MAKE CERTAIN THAT THE BEGINNING OF EACH RUN LOOKS EXACTLY LIKE THE END

Compare that to most other strips in the market that lose 30-40% light output from beginning to end

As the original company to introduce FLEXIBLE LED strip, JESCO Lighting is the go-to choice for designers who realize that not all LED strips are the same

- Extensive collection of high-lumen outputs at 90 CRI
- At least 30% brighter than any strip in the market
- Very high efficacy
- Easy installation with in-line clips or snap-on connectors
- Field-cutable as little as every $\frac{3}{8}$ "
- Indoor/Outdoor Static White, Static Colors, RGB, RGBW, RGBWW, Color Tunable, Full Spectrum and more

Matching our 24V strip offering with our patented 120V INFINA® LED strip that allows runs of 150 feet and sold in lengths in precise 4" increments means JESCO can meet any of your design needs.
