FOR USE UPON RECEIPT — 2007

Java From Jesco, That Doesn't Come In A Cup

New Product Line: Java Series 501 — a striking collection of contemporary, original-design cased glass pendants, wall sconces, floor and table lights.

Design: Jesco In-House Lighting Design & Engineering Team.

Manufacturer: Jesco Lighting, Inc., “the future of lighting.”

Product Applications: Java Series 501 provides combination nonglare direct and diffused illumination within crisp, eye-catching design aesthetics. Each model works across a range of decorative interior applications. These include building corridors, conference and meeting rooms, corporate dining, executive suites; healthcare reception areas; hospitality venues; restaurants and upscale residential interiors.

Product Description: Java Series 501 fixtures are characterized by a family of coordinated individual lighting designs, with continuity throughout six models.

Their mid-scale, fluted glass shades fill with diffused light and radiate it with a subtle, colored iridescence. One-light and three-light pendants present slender, tapered inverted vase-like shapes. These project focused direct downlighting, while the shades emit broader patterns of ambient light. Clear suspension cords and domed ceiling canopies contribute to the design aesthetic.

Two sizes of wall sconces have upright vase-like shapes, in contemporary interpretations of traditional torchieres, with discrete domed wall canopies. Companion table and floor models complete the collection. Inherent variations in the glass add depth and visual interest.

Java From Jesco . . . page 2

Wall sconces, floor and table lights have top apertures that allow emitted light to radiate upwards. Pendant models employ one T10 100-watt incandescent lamp each. Wall sconces, floor and table designs use one B10 60-watt incandescent each.

Construction & Finishes: Fixtures are constructed of cased opal glass shades with aluminum fittings in satin nickel finishes. Each model is UL and CUL listed.
