Whiteness, High Color Rendition, And Economy Are Inherent Virtues With New Series 901/902 Metal Halide Track Lighting From Jesco

New Product Introduction: Series 901/902 Metal Halide Single- and Dual-Spot Track Lighting.

Design: Jesco In-House Lighting Design & Engineering Team.

Manufacturer: Jesco Lighting, Inc., “the future of lighting.”

Product Application: Series 901/902 is a metal halide track lighting system, based on aimable, rotatable single and dual lightheads, with integral HPF electronic ballasts.

Series 901/902 becomes an integrated functional and aesthetic enhancement to any commercial, institutional or upscale residential interior environ.

Typical installations include building lobbies, casinos, hotel and professional office facilities, merchandise showrooms, museums and galleries, restaurants, up-market retail boutiques, and upscale residential applications.

Product Description: Series 901/902 embodies a highly contemporary, information-age design. Its rectilinear track shape, with “tekkie” appearing rotatable metal halide lightheads, integrates fully into wide-ranging interiors. Once positioned, units readily lock into place with the turn of an ordinary screwdriver.

Jesco Introduces Series 901/902 Track Lighting... page 2

Interconnectable ceiling-mounted or suspended track, with aimable single or dual spot rotating lightheads, complements the architectural elements of a space, highlighting objects, furnishings and merchandise displays.

A convenient on/off switch at each fixture means lamps can be changed without shutting off an entire "run" or the whole system.

Series 901/902 is a modern-day solution to standard, less energy-efficient or lower-output track lighting systems. It offers new-generation high-lumen output, low-watt metal halide lightheads. With one or two lightheads per integral electronic ballast, units tilt 70°; rotate 330° and lock into desired position, to suit changing illumination or design requirements.

Construction & Finishes: Series 901/902 is made from extruded and die-cast aluminum with textured metallic silver, matte black or white finishes.

Lightheads are high-efficiency optical designs that provide wide, even, conical arrays of intense white metal halide light with true color rendition.
