New Recessed Directional Luminaires From JESCO Really Stand Out

New Product Line: Recessed Directional

Luminaires — series of small-scale single- and multiple-unit adjustable, recessed contemporary downlight modules.

Design: JESCO Lighting In-House Lighting Design & Engineering Team.

Manufacturer: JESCO Lighting, Inc.

Product Applications: **Recessed Directional Luminaires** provide a homogenous family of crisp, aimable, accurate downlighting from discrete recessed units. The designs are ideal for use as display or accent lighting in museums, galleries and merchandise showrooms, dining and hospitality venues, upscale retail, building entryways and corridors, other commercial, institutional and residential interiors.

Product Description: **Recessed Directional Luminaires** are unobtrusive recessed ceiling modules with a choice of an integral trim flange, or a flangeless design. Each model offers highly contemporary, compact, visually unobtrusive alternatives to traditionally larger, bulkier recessed lighting or more obtrusive track units.

Architectural housings contain one to six lighting elements, in a choice of linear or parallel configurations. **Recessed Directional Luminaires** can be mixed and matched within an installation for continuity to meet spatial lighting and interior-design requirements. A field-adjustable module with double gimbal trim provides 45° outer, and 40° inner, adjustment with 359° rotation for lighting versatility.

Construction & Finishes: Recessed Directional Luminaires are constructed from cold-rolled steel housings, with a separate wiring compartment for assured operating safety. Housings have a black high-temperature powder-coat painted finish; mounting flange and lamp assemblies have a black, white or metallic silver finish.

Illumination for **Recessed Directional Luminaires** is provided by a range of low voltage, line-voltage or metal halide lamps. A dimmable, soft-circuit electronic transformer provides reliable, virtually noiseless operation. **Recessed Directional Luminaires** can be specified in line- or low-voltage models. All models are UL and CUL listed.
